

Act as a candid senior cybersecurity career advisor and evidence-based job-fit analyst.

Analyze every attached job description against my current résumé and the career background I provide. Build an Excel workbook that ranks the roles by documented qualification fit and recommends where I should invest my application effort.

Do not simply match keywords or assume that familiar titles mean strong fit. Evaluate the actual work, mandatory requirements, industry specialization, scope of responsibility, and available evidence.

INPUTS

- Current résumé: [Attach]
- Job descriptions: [Attach]
- Additional career evidence or corrections: [Insert]
- Location, compensation, travel, onsite, and work-authorization constraints: [Insert]
- Analysis date: [Insert or use today's date]

EVIDENCE RULES

1. Treat my current résumé and explicit corrections as authoritative. Use prior conversation or memory only as supplemental evidence and identify its source.
2. Do not invent or fabricate experience, certifications, completed degrees, tools, management tenure, or industry exposure.
3. Do not count an in-progress degree as completed or certification preparation as an earned certification.
4. Distinguish total career years from relevant functional years and specialized experience years.
5. Distinguish people management from project leadership, mentoring, and leading a function.
6. Distinguish reviewing assurance reports and validating compliance evidence from personally testing control design and operating effectiveness.
7. Distinguish operationalizing an established framework from designing a new framework.
8. Distinguish internal stakeholder delivery from external consulting, client-account ownership, and business development.
9. Do not equate regulated-industry experience with direct banking, investment management, payments, crypto, or financial-regulator experience.
10. Label limitations as either:
 - Confirmed gap.
 - Evidence not provided.
 - Partially transferable experience.
 - Requires clarification.
11. If critical evidence is missing, ask one consolidated set of targeted questions before final scoring. If I request immediate completion, proceed with explicit provisional assumptions.

SCORING MODEL

Use: $S = 100 \times (0.40M + 0.35D + 0.15P + 0.10E)$

Where:

- M = must-have qualification proportion.
- D = job-duty proportion.
- P = preferred qualification proportion.
- E = relevant years divided by required years, capped at 1.

Score each requirement, preference, and substantive duty:

- 1 = directly meets it with a defensible example.
- 0.5 = partially meets it or has closely transferable experience.
- 0 = confirmed gap or cannot substantiate it.

For M, D, and P:

Category score = sum of item credits / number of items.

For every scored item, show the evidence and explain why that credit is defensible.

EXTRACTION AND DENOMINATOR RULES

- Separate mandatory qualifications, preferred qualifications, and duties.
- Preserve explicit must-have versus preferred wording.
- Use consistently defined, independently assessable items.
- Split compound bullets only when they contain distinct obligations; explain the treatment.
- Do not inflate denominators by treating every optional framework, tool, or certification example as a separate requirement.
- Exclude marketing language and “other duties as assigned.”
- Do not count repeated descriptions of the same obligation twice within a category.
- Score all substantive duties, not just the five displayed in the ranking sheet.
- Identify specialist responsibilities that dominate the role, including any stated percentage allocation.

YEARS OF EXPERIENCE

- Use documented relevant years, not total tenure by default.
- For a range such as 5–8 years, use the lower bound and disclose it.
- For multiple mandatory tenure requirements, calculate each ratio separately and use the lowest ratio as E.
- Do not substitute general GRC years for required AI, financial-services, management, or other specialist years.
- If required tenure exists but my relevant tenure is unverified, flag it explicitly. Do not invent a year count.

MISSING CATEGORIES

If preferred qualifications or a numerical experience minimum are not stated:

- Label the category “Not stated.”
- Use a disclosed neutral 0.5 placeholder to retain the specified weights.
- Do not describe that placeholder as earned qualification credit.
- Show sensitivity scores with the missing category set to 0 and 1.
- Flag any ranking that changes materially under those assumptions.

SCREENING GATES

Evaluate hard requirements separately from S:

- Mandatory certifications.
- Completed degrees.
- Specialized industry or functional experience.
- People-management tenure.
- Work authorization.
- Location, onsite attendance, travel, or clearance requirements.

A high S must not override a failed mandatory requirement.

Distinguish confirmed screening failures from requirements whose evidence is missing.

EXCEL DELIVERABLE

Create an actual .xlsx workbook, not just a table in the response.

Sheet 1: Priority Ranking

Sort by ascending numerical rank, with rank 1 assigned to the highest S.

Include:

- Priority Rank.
- Company Name.
- Role Title.
- MHQ.
- PQ.
- YoE.
- JD.
- Job Duties List.
- People Manager Role.
- Role Age.
- S Fit Score.
- Screening Status.
- Key Gaps / Missing Evidence.
- Application Recommendation.
- Source.

Display MHQ, PQ, YoE, and JD as proportions or percentages.

Display S on a 0–100 scale.

Job Duties List: List the five most important duties using precise function keywords followed by plain-English descriptions. Prioritize the role's actual emphasis, not my strongest skills.

People Manager Role:

- Y when direct people-management responsibilities are explicit.
- N when they are not established by the description.

Explain that N does not prove the absence of direct reports.

Flag ambiguous reporting arrangements for clarification.

Role Age:

- Preserve the supplied posting or reposting age.
- Distinguish repost age from original posting age.
- Do not infer exact dates without a dated source.
- Do not treat applicant clicks as completed applications.
- Verify live vacancy status only if requested or necessary, and identify the source and verification date.

Sheet 2: S Ascending

Sort literally from lowest to highest S.

Sheet 3: Item Scoring

Show company, role, category, exact requirement or duty, credit, candidate evidence, limitation, and source.

Sheet 4: Years Evidence

Show each tenure requirement, credited relevant years, required years, ratio, and assumptions.

Sheet 5: Method and Assumptions

Document weights, missing-category treatment, evidence boundaries, screening rules, analysis date, and confidence.

Sheet 6: Source Job Descriptions

Preserve the supplied descriptions for traceability.

Use formula-based scores, filters, frozen headers, wrapped text, and readable column widths. Clearly explain whether rankings must be re-sorted after input changes. Validate the arithmetic and confirm the file exists before announcing completion.

APPLICATION STRATEGY

For each role, assign:

- Prioritize.
- Conditional: clarify before investing.
- Stretch.
- Deprioritize.
